

IoD Balanced Scorecard for Government

IoD Balanced Scorecard for Government

The Institute of Directors (IoD) has developed a Balanced Scorecard for Government to provide a transparent, objective and strategic framework for evaluating the UK Government's economic performance. This initiative consists of **10 Key Performance Indicators (KPIs)** that span critical areas such as business confidence in the economy, ease of doing business, access to skills and labour, economic management, and ease of trade.

The goal is to offer a clear, data-driven assessment of how well government policies are supporting long-term economic growth and national prosperity.

By applying the Balanced Scorecard approach – something that is commonly used in business and is taught by the IoD via its professional development courses for directors – the IoD aims to hold government accountable in a constructive and non-partisan way. This tool will help business leaders, policymakers, and the public understand whether the Government is delivering on its economic promises and where improvements are needed. It also encourages strategic alignment between public policy and the needs of the business community, fostering a more resilient and competitive economy.

Ultimately, the Balanced Scorecard for Government is about progress through transparency – empowering stakeholders with the insights needed to drive better decision-making and ensure that economic policy delivers real, measurable outcomes for the UK.

IoD Balanced Scorecard for Government

Key Performance Indicators

Indicator	Target	Level as of July 2024	Latest level	Target (end of this Parliament=summer 2029)	On track?	Source
